

## Call for tenders' details

Title: Smart statistics.

Start date: 27/06/2017

Time limit for receipt of tenders: 15/09/2017

Contracting authority: European Commission, DG EUROSTAT

Status: Closed

## Call for tenders question list

1	29/06/2017 15:52	03/07/2017 09:27	definition of 'extended' Internet of Things ecosystem	Could you please clarify what it is exactly meant by 'extended' Internet of Things ecosystem for the production of smart statistics? The term 'extended' is not clear for us in this context.	<b>03/07/2017</b> The term "extended Internet of Things data ecosystem" refers to an integrated system of smart devices and smart sensors that produce massive "machine generated" data in real-time or almost real-time. In this context, an extended IoT data ecosystem covers a wide range of diverse smart devices and cross-platform deployments of various embedded technologies, as an example shown in Figure 2, titled "Internet of Things: application areas and integration", in the technical specifications. The integration of other human generated data cannot be excluded from an extended IoT data ecosystem.

2	10/08/2017 12:30	11/08/2017 10:32	Criterion 1.1.	We interpret this criterion as requiring at least three projects which produced statistical figures from big data using appropriate data science methods. They do not need to have produced official statistics or figures resembling official statistics. For example, in projects for producers of mobile phones, we analyse big data sets in order to estimate statistical models that compute in real time the probability that a phone call will be dropped or in order to study the factors that affect battery life. These are statistical projects and would be eligible. Is this interpretation correct?	<b>11/08/2017</b> Yes, this interpretation is correct.
