	Renewal of EU design registrations	2		

Total scenario = ²

A = Theoretical yearly consumption ¹

B = Price in € offered by the tenderer according to Annex 3 "Financial offer"

C = consumption (column A) multiplied by price (column B)

¹ The purpose of the theoretical yearly consumption is to evaluate on an equal basis the financial offers from the tenderers according to a defined scenario that gives to some items of the pricelist a pondered emphasis, therefore it is not based on the yearly consumption foreseen during the execution of the contract nor it is a yearly average of the consumption of the present Framework Contract.

² The "Total scenario" is the sum of all values of column "C". This result will be used in the price criterion P as the "quoted price of the tender" (**P_{tot}**) as referred to in the Administrative annex.

Date, Stamp and

Signature of bidder's legal representative: _____
